

NAME

CURLOPT_RTSP_SESSION_ID – set RTSP session ID

SYNOPSIS

```
#include <curl/curl.h>
```

```
CURLcode curl_easy_setopt(CURL *handle, CURLOPT_RTSP_SESSION_ID, char *id);
```

DESCRIPTION

Pass a char * as a parameter to set the value of the current RTSP Session ID for the handle. Useful for resuming an in-progress session. Once this value is set to any non-NULL value, libcurl will return *CURLE_RTSP_SESSION_ERROR* if ID received from the server does not match. If unset (or set to NULL), libcurl will automatically set the ID the first time the server sets it in a response.

DEFAULT

NULL

PROTOCOLS

RTSP

EXAMPLE

TODO

AVAILABILITY

Added in 7.20.0

RETURN VALUE

Returns *CURLE_OK* if the option is supported, *CURLE_UNKNOWN_OPTION* if not, or *CURLE_OUT_OF_MEMORY* if there was insufficient heap space.
